Claim 17; Page 73-74; 113pp; English.

The present sequence represents a secreted protein. The polynucleotide and secreted protein are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating (e.g. as vaccines) or suppressing activity, haematopoiesis regulating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                   The sequence represents a human junctional adhesion molecule 2 (JAMZ). The polynucleotide encoding the polypeptide is useful for recombinant production of JAM-2 protein, which in turn is useful for the production of antibodies. The antibodies may be used for probing cellular localisation and/or expression of JAMZ in tissues under normal and disease states, for immunoprecipitating JAMZ protein from cells and/or stroke tissues to determine whether it is modified by glycosylation and phosphorylation, and for determining JAMZ function. The antibodies inhibit interaction of JAMZ with inflammatory cells or influences their paracellular migration, and is therefore useful for alleviating arthritis, inflammatory diseases such as arthritis, asthma, rheumatoid arthritis, inflammatory bowel disease and Crohn's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human, cytostatic, antirheumatic, antiarthritic, vulnerary; analgesic, antinflammatory; antibacterial; immunosuppressive; antiparkinsonian; neuroprotective; noctropic; osteopathic; haemostatic; vasotropic; antiulcer; fungicide, antidiabetic; antiasthmatic; antiallargic; immunostimulant; antidiabetic; secreted protein; transmembrane protein; cytokine; cell proliferation; cell differentiation; autoimmune disease; stem cell; growth factor; nervous system disease; neuropathy; Alzheimer's disease; parkinson's disease; huntington's disease; osteoporosis, severe combined immunodeficiency; SCID; infection; multiple sclerosis; rheumatoid arthritis; gene therapy.

The invention relates to human secreted or transmembrane protein (I), their fragments and is encoded by specific complementary deoxyribonucleic acid (cDNA) inserts (II), where the protein is subsentially free from other mammalian proteins. (I) are useful for preventing, treating or meliorating a medical condition, especially immunological treatment or prevention of tumours. (I) exhibits activity relating to angiogenesis, or prevention of tumours. (I) exhibits activity relating to angiogenesis, or tumour of tumours. (I) exhibits activity relating to angiogenesis, or the call proliferation, cell differentiation, antihilammatory, stem cell growth factor activity and activin or inhibin-related activity activities. (I) can be used to manipulate stem cells in culture to give rise to neuropitablellal cells that can be used to augment or replace cells damaged by illness, autoimmune disease, accidental canage or rise to neuropitable there and brain tissue and is useful for the treatment of genetic disorders in brain tissue and is useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as lateral sclerosis. (I) is involved in chemotactic or chemokinetic activity, regulation of haematopolesis and is useful for treating nervous contraints, bone degeneration of hone, cartilage, tendon, ligament and/or nerve cand for regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth and in tissue repair, healing of & burns, incissions, ulcers, for treating osteoporosis, osteoarthritis, bone degeneration or parious immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, curvarious tissues, various immune deliciencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections and conditions, such as asthma or other respiratory problems. (II) is useful to express recombinant generalially expressed and in gene therapy. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel secreted or transmembrane protein and polynucleotide encoding the protein, useful for diagnosis and treatment of neurological disorders, cancer, autoimmune diseases, bone disorders and lung or liver fibrosis.
                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                 Evans

The present invention describes an isolated nucleic acid molecule, which comprises the sequence of any of the genes that are up-regulated or down-regulated in specific cancers (e.g. about 1031 genes up-regulated in acute lymphocytic leukemia.) ACC75641 to ACC72860 represent cancer related gene nucleotide sequences which encode the proteins given in ABRSSASI to ABRSSA020. Also described: (1) determining the presence or absence of a pathological cell in a patient; (2) an expression vector comprising a nucleic acid molecule described above; (3) a host cell comprising the vector; (4) an isolated polypeptide, which is encoded by the nucleic acid; (5) an antibody that specifically binds the polypeptide of (4), (6) specifically targeting a compound to a pathological cell in a patient by administering to the patient the antibody above; and (7) a patient by administering to the patient the antibody above; and (7) a chargeuitc targets. In particular, the nucleic acid is useful for therapeutic targets. In particular, the nucleic acid is useful for diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow,

                     New genes that are up-regulated or down-regulated in cancers, useful as markers for diagnosing e.g. cancer, ischemia or heart diseases, or as therapeutic targets for screening drugs for treating these diseases.

This sequence represents a secreted human protein encoded by the gene clone detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fo portion (e.g. AAV34277) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 28 novel genes and their fragments (nucleic acid sequences AAV34286-V34325; amino acid sequences AAV34286-V34325; amino or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polypuclectides. Specific uses are described for each of the 28 polynucleotides, based on which tissues they are most highly expressed in (see AAV34286 for described uses)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             IAAVVVVALVISVCGLGVCYAQRKGYFSKETSFQKSNSSSKATTMSENDFKHTKSFII 298

AAD44616-AAD44676 represent cDNAs corresponding to 28 human secreted protein genes, and AAE2699-AAE2699 represent the proteins they encode. AAE27000-AAE27025 represent human secreted protein fragments or their variants. The secreted proteins and genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Specific uses are described for each of the 28 genes, based on the tissues in which they are most highly expressed and include everloping products for the diagnosis or treatment of immunodeficiencies, e.g., X-linked agammaglobulinamia E cell immunodeficiencies, severe combined immunodeficiencies, autoimmune disorders e.g., systemic lupus erythematosus, rhoumatoing arthritis, multiple solarosis, autoimmune thyroiditis, autoimmune haemolyric anaemia, Goodpasture's syndrome, Grave's disease, diabetes mellitus, dermatitis, inflammatory conditions
         Parkinson's disease, Alzheimer's disease, cardiovascular disorder, atheresoclerosis, myocarditis, renal disorder; fungicide, virucide, hyperproliferative disorder; acute glomerulonephritis; tonsilitis; respiratory disorder, rhinitis; sinusitis; neurological disease, endocrine disorder, Addison's disease, reproductive system disorder; endometriosis; vasotropic; vulnerary; cytostatic, nootropic; cardiant; anti-HIV; tranquilliser; gout; antiparasitic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel human secreted polypeptides and polynucleotides for diagnosing, preventing, treating immune, hyperproliferative, cardiovascular, neurological, reproductive disorders and identifying modulators of

Abb44884-AAD44984 represent cDNAs corresponding to 28 human secreted corresponding to 28 human secreted protein genes, and AAE27137-AAE27137 represent the proteins they encode. CAEE27138-AAE27164 represent human secreted protein tragments. The genes can define corresponding secreted proteins are useful for preventing. CC treating or ameliorating medical conditions, e.g., by protein or gene therapy. Secreted protein sequences of the invention are useful for the diagnosis or treatment of disorders such as autoimmune diseases (e.g. the breast or liver), cerebrovascular disorders (e.g. cerebral isohaemia, angiogenesis), cardiovascular disorders (e.g. cerebral isohaemia, system disorders (e.g. Alzheimer's disease), infections caused by fungi, bacteria and viruses and ocular disorders (e.g. corneal infection). The proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. They can also be used as food additives or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and conter nutritional components. The present sequence represents a human correct of the presents a human content of the content.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid molecules encoding 28 human secreted proteins, useful for diagnosing, preventing, treating or ameliorating medical conditions and as food additives or preservatives.

the invention

```
The present invention relates to novel human secreted proteins (ABR47633-CC ABR48145) and their coding sequences (ACC50344-ACC50856). The proteins and their coding sequences are useful for the preparation of a diagnostic cor pharmaceutical composition for diagnosing or treating a cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest, coronary aretrifosolerods and mycoardial ischaemia), meural disorders, immune system disorders and/or cancerous diseases and conditions, for gastrointestinal disorders and/or cancerous diseases and conditions, for wound healing and epithelial cell proliferation to treat inflammation or infection, for treating thrombosis and arteriosclerosis, for treating thrombosis and arteriosclerosis, for treating or preventing neural damage which occurs in neuronal discorders or infection. Conditions such as Alzheimer's disease and Parkinson's disease, to enhance bone and periodontal regeneration and aid in tissue transplants or bone graffes, to prevent skin aging or hair loss, to stimulate growth and differentiation of haemacopoietic cells and bone marrow cells when used in combination with other cytokines, to maintain organs before transplantation or for supporting cell culture of primary

AB271190-AB271478 represent CDNAs corresponding to 178 human secreted

C protein genes, and ABP00011-ABP00299 represent the proteins they encode.

AB271479-AB2714740 represent human secreted protein genomic fragments. The

invention also encompasses antibodies specific for the secreted proteins,

the use of the secreted proteins in drug screening, and recombinant

to vectors and host cells comprising a nucleic acid of the invention. The

secreted proteins, nucleic acids encoding them, antibodies or antibody

fragments specific for the secreted proteins, and modulators of protein

c secreted proteins, such conditions include disorders of protein

activity are useful for diagnosing, treating, ameliorating or preventing

digestive disorders. Such conditions include disorders of the mouth,

c esophagus, scorned, small intestine, large intestine, liver, biliary

tract and pancreas, and include cancers of these organs and tissues. The

creatment of immune disorders, inflammation, infection,

treatment of immune disorders, and to promote wound healing. Nucleic acids

of the invention may be used for chromosome individuals from minute

c mapping, in gene therapy, for identifying individuals from minute

biological samples, as hybridisation probes, and as molecular weight

c markers. The present sequence represents a human secreted protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ô

The invention relates to an isolated polypeptide comprising an amino acid pactured at least 95% identical to sequence of 28 human secreted proteins, their fragment, polypeptide domain, epitope, secreted form, variant, allelic variant, or species homologue, or the encoded sequence included in ATCC 9721 and 97922. Also included are the encoding mucleic acids, recombinant vectors, host calls, antibodies, and genes. The proteins and nucleic acids are useful for diagnosing, preventing, reaching, prognosing or ameliorating a medical condition e.g. immunodeficiencies (e.g. X-linked agammaglobulinaemia, B call immunodeficiencies, severe combined immunodeficiencies), autoimmune sistemment by systemic erythematosus, rhtumatoid arthritis, multiple sclerosis, autoimmune thyroidits, autoimmune haemolytic anaemia, dermatitis), acodpasture's syndrome, Grave's disease, diabetes mellitus, dermatitis),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              haemacopoietic disorders, inflammatory conditions (e.g. septic shock, sepsis, reperfusion injury, inflammatory bowel disease, Crohn's disease), respiratory disorders (e.g. asthma and allergy), gastrointestinal disorders, cancers (e.g. gastric, ovarian, lung, bladder, liver and breast), central nervous system (CNS) disorders (e.g. ischaemic brain injury, meurodegenerative disorders (e.g. Parkinson's disease and Alzheimer's disease, AIDS-related dementia, and prion disease), cardiovascular disorders (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New human secreted polypeptides and polynucleotides for diagnosing, prognosing, preventing and treating immune, hyperproliferative, liver, kidney, reproductive disorders and for identifying modulators of therapeutic use.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Kyaw H, Fischer CL, Li

cc bypass complications), inflammation (e.g. hepatitis, gout, trauma, parcraititis, asrcoidosis, dermatitis, alloganic transplant rejection), parcraititis, alloganic transplant rejection), blood-related disorders (thrombosis, arterial thrombosis), blood-related disorders, renal disorders (e.g. acute disorders, renal disorders (e.g. Addison's disease, hyperthyroidism, hyperpluitarism), liver diseases and disorders, reproductive system disorders (e.g. addisorders, reproductive system disorders. Many other diseases and disorders are listed in the specification. They also useful as a vaccine adjuvant. Further they are before or inhibit complement madiared cell. Further they are useful to enhance or inhibit complement madiared cell. Further or secular or lymphatic diseases or disorders. They are also useful to prevent hair loss, to modulate mammalian characteristics such as body height, weight, hair colour, and to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, missubilities, fat content, lipid, protein, carbohydrate, vitamins, and so useful for identifying binding partners. The proteins are also useful for identifying binding partners. The proteins are corrected protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

The invention relates to isolated nucleic acid molecules ADB91065-ADB91948 and ADB9185-ADB91911 encoding human secreted proteins ADB91449-ADB919811 encoding human secreted proteins ADB91849.
ADB91894. Also disclosed is a recombinant vector comprising a ADB91881-ADB91911 encoding not be compared to the invention, and secreted proteins a polymeric of the invention is useful in identifying a binding partner by contacting the polymetic with a binding partner, and determining whether the binding partner increases or decreases activity of the polymetic or antegonist are useful for preparing a pharmaceutical composition for diagnosing or treating diabetes or conditions related to diabetes. The present sequence is that of the human immunoglobulin FC portion used to generate fusion proteins, increasing the stability of the fused protein as compared to the secreted protein or increased protein as compared tid not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ·.

The invention relates to a novel human secreted polypeptide comprising a defined sequence given in the specification. The polypeptide, nucleic acid molecule, antibody, agonist or antagonist of the invention may be useful for preparing a composition for diagnosing or treating a hammation and treating a composition for diagnosing or treating a hammation and a stream as an anaemia, autoimmune disorders such as rheumatoid arthritis, inflammation, Grave's disease, clipatetes, systemic lupus erythematosus or glomerulonephritis, neurodegenerative disorders including Parkinson's disease and Alzheimer's disease, wounds and hyperproliferative disorders including a therosclerosis or cancer, as well as bacterial, viral, fungal or parasitic infections. The polypeptide may also be used during gene therapy procedures and for identifying a binding partner by contacting the pulypeptide with a binding partner and determining whether the binding partner increases or decreases the activity of the polypeptide. The current sequence is that of the human secreted protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  241 IAAVVVVALVISVCGLGVCYAQRKGYFSKETSFQKSNSSSKATTMSENDFKHTKSFII 298

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides the protein and coding sequences of nove; proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, marcaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs from the organism of interest. They can be used in diagnostics, forenments, gene mapping, identification of mutations, to assess biodiversity and for untritional purposes. The present sequence is a protein of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention comprises the DNA and protein sequences of the extracellular region of human junctional adhesion molecules (huJAM). The extracellular huJAM DNA and protein sequences are useful in the treatment of: immune system disorders (e.g. immune deficiency); autoimmune disorders; inflammatory disorders; cancer; wound healing; or a cardiovascular disease. The present amino acid sequence represents the full-length membrane-bound huJAM2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New extracellular human junctional adhesion molecule (huJAM) polypeptide, useful for treating an immune system disorder such as an immune deficiency or an inflammatory disorder, cancer, wound healing, or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     09

The specification describes A33 related antigens PR0301, PR0362 and PR0245. The methods and compositions of the invention are useful for the treatment and diagnosis of inflammatory disease and tumours in mammals. Such inflammatory diseases include of inflammatory bowel disease.

Such inflammatory diseases include of inflammatory bowel disease.

Systemic lugues erythematosis, rheumatoid arthritis, juvenile chronic arthritis, spondyloarthropathies, systemic solvensis, solenderma, inflammatory myopathies, dermatomyositis, polymyositis, slopathic inflammatory myopathies, dermatomyositis, polymyositis, slopathic inflammatory myopathies, dermatomyositis, polymyositis, slopated informbocytopenia, idopathic thrombocytopenia parcysmal nocturnal hemoglobinuria, immune mening immune-mediated thrombocytopenia, thyroiditis, draws attophic thyroiditis, diabetes mellitus, immune-mediated renal disease, glomerulonephritis, thyroiditis, describinating diseases, idiopathic peripheral nervous systems such as multiple sclerosis, idiopathic peripheral chrosis, granulomatous hepatitis, sclerosing cholangitis, primary cirrhosis, granulomatous hepatitis, sclerosing cholangitis, inflammatory and fibrotic lung diseases, gluten-sensitive enteropathy, inflammatory and fibrotic lung diseases, gluten-sensitive enteropathy,
                                                                                                                                  295

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

protein-tyrosine kinase (EC 2.7.1.112) Flk-1 precursor, endothelial cell-specific receptor c. Species: Mus musculus (house mouse)
C.Date: 19-Unn-1992 #sequence revision 19-Unn-1992 #text_change 04-Feb-2000
C.Accession: A41228, A46065; T58365; S1895918.
R.Matthews, W.; Jordan, C.T.; Gavin, M.; Jenkins, N.A.; Copeland, N.G.; Lemischka, I.R. Proc. Natl. Acad. Sci. U.S.A. 88, 9026-9030, 1991
A.; Title: A receptor tyrosine kinase cDNA isolated from a population of enriched primitive A; Reference number: A41228; MUD: 92020984; PMID: 1717995
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ajactesion: Ail-Accession: Ail-Acces
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    C;Superfamily: unassigned Ser/Thr or Tyr-specific protein kinases; protein kinase homolog C;Keywords AfP; autophosphortation; phosphoprotein; phosphotransferase; transmembrane f F;830-1165/Domain: protein kinase homology <RIN> F;838-846/Region: protein kinase ATP-binding motif

neural cell adhesion molecule 2 - African clawed frog
N'Alternate names: N-CAM 2
C'Species: Xenopus lacvis (African clawed frog)
C'Species: Xenopus lacvis (African clawed frog)
C'Species: Us-May-1998 #sequence_revision 29-May-1998 #text_change 21-Jul-2000
C'Spacession: USO100
